

FOR IMMEDIATE RELEASE

ClearFlow Expands Award-Winning Solution to Transform Public Works Management

New GIS-powered platform unifies fleet and motor pool, facilities, stormwater, roads, and citizen services—modernizing CMMS, streamlining asset management, and improving community services.

Grand Rapids, MI – September 9, 2025 – Municipalities facing aging infrastructure, tight budgets, and rising citizen expectations now have a practical option. ClearFlow today announced the launch of its next-generation Public Works Management platform, built on Esri ArcGIS technology. It simplifies operations, automates workflows, and optimizes asset management—delivering full ROI within months.

Transforming Public Works Management. ClearFlow’s platform enables public works teams to manage vertical and horizontal infrastructure within a modern, scalable system. From facilities and fleets to roads, stormwater, and parks, departments can automate maintenance, digitize inspections, and prioritize investments using real-time asset risk scoring. Together with ClearFlow’s water and wastewater solutions, the platform delivers a powerful, end-to-end solution for municipal management.

Built by Utility Pros, Proven in the Field. Designed by utility and GIS professionals, ClearFlow fixes what legacy systems can’t: disconnected workflows, clunky desktop tools, paper-based inspections, compliance gaps, and limited visibility. ClearFlow deploys in weeks and is purpose-built for utilities and public works, not adapted from generic software. With award-winning results and proven solutions, ClearFlow is trusted by communities of all sizes.

Key Features and Benefits:

- **All Assets in One System:** Manage Facilities, Fleet & Motor Pool, Roads, Parks & Grounds, Stormwater, and Citizen Reporting within one platform.
- **System-Wide Visibility:** Track asset condition and performance instantly, improving service delivery and extending asset life.
- **Automated Workflows:** Replace manual processes with automated work orders, inspections, and compliance.
- **Citizen Reporting Integration:** Convert resident reports into automated work orders with real-time tracking.
- **Capital Improvement Planning (CIP):** Prioritize investments with risk-based scoring, real-time dashboards, and board-ready reporting.
- **Field-Ready Tools:** Mobile access, QR SmartTags, and LiDAR digital twins boost field productivity and accuracy.

Shaping the Future of Public Works Management. By combining GIS with automated workflows and intuitive mobile tools, ClearFlow provides a scalable, future-ready solution that helps leaders reduce costs, improve service delivery, and prepare for emerging challenges.

About ClearFlow. ClearFlow LLC delivers cost-effective, scalable SaaS solutions for utility and public works management, powered by Esri technology. Our mission is to help municipalities streamline asset management, enhance efficiency, and modernize operations for a sustainable future. ClearFlow's proven results have earned broad industry recognition with multiple awards for excellence in utility management.
